

## 1 Basic URLs

Basic url: `http://example.com/~user` or `http://example.com/~user.`

Path url: `/foo/bar/baz` or `/foo/bar/baz`

## 2 Verbatimness

Special characters neutralized: `http://example.com/foo_bar`, `http://example.com/foo#bar`, `http://example.com/foo&bar`.

And even though `\baz` gives `index.html`; `C:\foo\bar\baz`

OTOH, you get this: `http://example.com/~{user}`

## 3 Styles

Email: `myself%node@gateway.net` or `myself%node@gateway.net.`

## 4 Defined urls

Myself: `myself%node@gateway.net` or `myself%node@gateway.net.`

## 5 Bracketting

Fancy url: `<url: http://example.com/~user>` or `<url: http://example.com/~user>.`
